

Research Scientist Interview Process Intro

(To Candidates)

The entire process typically takes between **2.5 to 3 weeks**, depending on your availability as well as that of the interviewers.

Please always feel free to reach out to your recruiter or interview coordinators if you have any questions regarding interview feedback or the progress of your scheduling.

1 Craft Interview (60 mins, in Mandarin)

You will talk to the team lead and one of the key researchers in the Beijing Research Team.

They would like to deep dive with you about a research project you have done before and are most proud of.

Preparation Needed: 15 mins presentation about a research project (please pick one or two)

Interview Agenda:

- 15 mins - your presentation of the project
- 20 mins - deep dive and discussion about this project
- 15 mins - technical questions about your other experience
- 10 mins - feel free to ask your questions!

2.1 Coding Exercise (120 mins, in Mandarin)

This interview is specifically designed to evaluate your practical coding skills.

Prior to scheduling the interview, you will receive a preparation document that outlines the format and necessary preparations.

On the day of the interview, you will spend the first 60 minutes independently working on the given requirements. The interviewer will join you for a live discussion during the subsequent 60 minutes.

2.2 Technical Interview (45 mins, in English)

You will talk to a researcher from another location.

The interview doesn't include any coding. It will be in Q&A format.

This interview will assess your technical skills and problem-solving abilities specifically related to deep learning models for text-to-image generation (such as diffusion models). We want to understand how you approach real-world challenges, debug and optimize models, and handle large-scale distributed training and inference. Additionally, we will evaluate your understanding of underlying algorithms and system design. Overall, we are looking for both theoretical knowledge and practical engineering expertise.

It may cover: Conceptual Understanding & Problem Solving, Debugging & Optimization Strategies, Scalability & Distributed Training, Profiling & Performance Optimization, Engineering & Low-Level Optimization, Algorithmic & Systems-Level Knowledge

3 Research Lead Interview (45 mins, in English)

You will talk to a Research Lead from another location.

They will learn about your previous research experience, as well as assess your communication and collaboration skills, along with your strategic thinking abilities.

The interview doesn't include any coding. It will be in Q&A format.

Preparation (not required but suggested): a few slides to show your key research experience and internship experience
